Irtiza Babar (personal site)

Full Stack Developer experienced in both front- & back-end web development. I specialize in creating user-friendly designs that are optimized for SEO and accessibility with close attention to detail, providing a friendly experience for the user.

I not only design and develop websites but also regularly test them to maintain their performance and fix any issues that arise. I also prioritize clean and organized code to make sure that it's easy to read and maintain.

Here are some sites i have developed:

EXPERIENCE

Digitano LLC, *Full Stack Developer*

JAN 2024 - PRESENT

- Led a complete Refactoring of a legacy laravel codebase to improve performance, readability, and maintainability.
- Collaborated with Designers and developers to create high-quality responsive websites.
- Created Admin Dashboard for managing site.
- Constantly check for application responsiveness and eliminate bugs. As well as using linters/formatters to keep code manageable.

JB, *Full Stack Developer*

FEB 2023 - NOV 2023

- Developed and maintained code for in-house web applications.
- Created designs and layouts for applications and web pages.
- Debug and fix existing software bugs to improve user experience & performance.

JB, *Frontend Web Designer(Internship)*

OCT 2022 - FEB 2023

During the internship I gained experience in creating appealing and

user-friendly interfaces.

My work included converting design ideas into functional web pages using HTML, CSS/SCSS, and JavaScript/JQuery. My focus was in creating visually appealing, responsive websites optimized for UX and cross-browser compatibility to provide a friendly experience for users.

I also worked in optimizing website performance by implementing best practices for front-end development, such as image optimization and code minification.

Overall, the internship provided me with skills in frontend web design, and a solid understanding of UI/UX principles.
